Gary –

Spoke with Mark Balhoff. We'll just use the hotel room to process samples. No need to mobilize the MCP.

Jeff:

I understand. I am assuming that we, based upon Brenda's comment, that we will add two sample locations:

- 1..HRS sample at : North of DSE-09 and East of DSE-06 along the line of DSE-09 (along the Bayou);
2. HRS sample at: Houma surface water intake that was sampled during the 1996 ESI, 2.5 miles downstream of the PPE

With these changes, I am good with the QASP.

Another question: Is DSE-09 just a surface soil sample or is there any depth to the samples?

Thanks

We can but Samples DSE-09, DSE-12 and DSE-15 are only for overland flow HRS analysis, and they will probably be clean since that area is higher than the pits and the associated drainage ditch to the west and south. Our samples (Removal Assessment) are -06, -11 and -14 which are located closer to the pit berms to determine if any lateral migration of contamination has occurred outside the berm area.

Jeff:

Can we add one sample location north of DSE-09/ East of DSE-06 (along the line of the sample locations along the Bayou)? Everything else looks good to me.

Brenda:

Please take a quick look at the QASP.

Thanks

Here's the final version of the QASP along with the Figures. I spoke with Denece and she said it should be uploaded to TeamLink pretty soon.
